

Wing Commander: Privateer utilizes Steam Input for controller functionality. To use a controller, you will need to activate Steam Input via the following steps:

1) Plug in your desired controller
2) From the game's page in Steam, tap the Controller icon
3) In the popup, choose "Enable Steam Input"
4) The "Official Wing Commander Privateer - Default" template should be selected. If not, please follow the next steps.
5) Select the "Recommended" tab
6) Choose the "Official Wing Commander Privateer - Default"
7) Select "Apply Layout"
8) Launch the game

Because this Steam Input configuration is mapped to Keyboard controls, we recommend swapping the in-game control scheme to Keyboard. Do this via the following steps:

Once on the planet, open the Options menu by pressing the Menu Button (Xbox Controllers), the Options Button (PlayStation Controllers), or the Menu Button (Steam Deck).

Select the Keyboard Option in the lower middle of the screen.

Xbox Controllers:

Fire Guns = RT
Nav Map / Cycle Nav = LT
Cycle Target = RB
Modifier Button = LB

Fire Missile / Select = A
Esc = B
Afterburners = X
Cycle Missile = Y
